

Center for Computational Science

The Center for Computational Science at Purdue University Calumet has been established to support, enhance and enable discovery in scientific and engineering fields where advanced computing is required. The Center is focused on providing faculty and their collaborators with access to programming support, software and grid-enabled supercomputing technologies, to enable them to solve today's most challenging problems.

The Center provides funding in the form of internal seed grants and travel grants, in support of faculty research, as well as limited support for student researchers.
